As Bk
approach

S4 1/2 - very professional + workmanlike + intelligent
in how it's all put together, engineered, constructed,
organized, etc.

S4 1/2 - technology or advanced; very sophisticated in
its approach: "like" few of principles employed
are new or innovative, but the utilization,
"synthesizing" combination of equipment +
principles, through a logical [development] a
projection of former technology, is still very
advanced + expands greatly the capabilities,
operating parameters and use of the system
involved.

5412 "Zones" of involvement. One "zone" (not necessarily physically defined) comprises all things directly related or supporting the "nerve center" or "operation center". Outside that (figuratively) there are other agencies or groups or organizations that are there to provide some sort of support for the main purpose of the institution, but which are not directly connected. A sense of cold-bloodedness, ~~calculated~~ calculations or cynicism connected of outside "zone" of involvement.

S4 1/2 - military involvement at site - but
"like" joint services operation - such as DIA
NSA is a combo of various military
branches + disciplines plus Gov. Sec. civilians...

One structure, previously described sloping me, hereafter referred to as "Opus Center" or "nerve center," involves sophisticated, likely, defense-related concept; the idea of an abstract "barrier", "trip wire", "shield", envelope; the organization of which is complex, intricately layered, overlapping, layered, & interlocking. There are other sites, perhaps similar in nature connected with it, but ~~not~~ great distances away. Impression of very profound & intelligent engineering/construction/organization involved. Though technology involved is not revolutionary or innovative; the way it's used, & combined w/ principles results in dramatically ^{enhanced} capabilities & use. The system is automatic, greatly reducing requirement for personnel.

There seem to be nonphysical "zones" of involvement. There are those people & agencies directly connected w/ the Opus Ctr. & its syst.; "outside" of that are people & agencies who are in syst. also but further removed. These people are cold-blooded, cynical, calculating.

West of Opus Ctr. is a cluster or groupings of structures, involving some sort of rounded concept, as well as angular. A lot of open space is involved one yr. ahead, as sense of "protection" + competition + "empire" protection is observed; as well as the sense of a need for validation of one's own, competitive idea or approach. "Probational" is a relevant concept here.

Cluster of structures not immediately connected
w/ hardware - i.e. missiles, ~~guns~~, or other such
prosaic type things. People involved present the
air of unity & teamwork, & sense of mission...
"prove" their project is all it's meant to be.

Site involves military in a "joint service"
sense - various branches & disciplines, together
w/ many civilian specialists & managers.
